DURA-LIFE™
Twice The Life Filter Bags

Award-Winning
Filter Media

Modular Baghouse

Compact, Modular Design

The enhanced Donaldson® Torit® Modular Baghouse (MB) delivers reliable, efficient, continuous-duty, pulse-jet operation. The MB advantage is found in the breakthrough technology of Dura-Life™ filter bags. Dura-Life bags offer longer bag life and reduced emissions. When it does come time to replace the filter bags, Quick-Release Filter Bag Cages have been added to the collector to make replacing filter bags easier. The MB provides reliable service with easy maintenance. Computer designed inlets and deflector plates, coupled with maximized bag spacing, result in optimal airflow with minimal abrasion. Advanced valves, providing 50% more cleaning air, result in a more efficient operation. Over the life of the collector, no other baghouse can provide this much value.

MB Offers:

- **New models with high body inlets allow higher air-to-media ratios on lighter dusts**
- **New square models help minimize ducting and accessory costs**
- **Dura-Life "Twice the Life" Filter Bags**
- **Clean-air bag access for easier bag service**
- **Welded design increases durability**
- **Integral fan option reduces space requirements**
- **Tool-free installation of filter bags & cages**
- **10-year warranty**

Modular Baghouse

Operations & Features

The Modular Baghouse collector comes in two models: the MBT allows walk-on, top access to the bags (clean-air side) of the collector. This configuration is ideal for indoor or tight budget applications. The MBW offers a walk-in clean-air plenum, so bags can be replaced in any kind of outdoor weather.

The MB has two inlet configurations; the most common configuration allows the dirty-air to enter through the hopper inlet located under the filter bags. The dirty air hits a deflector at the end of the inlet, which causes heavy particulate to fall directly into the hopper. This reduces the amount of dust that comes in contact with the bags resulting in longer bag life and lower pressure drop. For applications with light and fibrous dust, a high body inlet is available that reduces upward air velocities allowing the dust to properly fall into the hopper after the bags have been pulsed.

Donaldson®

Modular Baghouse

Engineered for Reliable Performance

Modular Baghouses are a reflection of Donaldson Torit's commitment to technical research and development. Sophisticated FLUENT®* computer airflow analysis has been used to assure the Modular Baghouse provides a uniform airflow resulting in reduced bag abrasion, longer bag life and lower maintenance costs.

Top view of Modular Baghouse with high inlet without airflow.

Top view of Modular Baghouse with high inlet showing FLUENT Computer Analysis of airflow.

FLUENT computer airflow analysis shows that the baffles in the MB high inlet deflect and reduce dust particle velocities and then properly distribute them throughout the collector for effective filtration with minimum bag and collector wear.

Easy Maintenance Quick-Release Filter Bag Cages (patent pending) make filter bag removal extremely easy. When swung into position, the handle serves as a lever to remove the cage from the tubesheet. The Quick-Release Filter Bag Cage requires only 6 pounds of force to remove compared to other cages that require 50 pounds.

Modular Baghouse

Dura-Life™ Filter Bag Technology

*Standard in All Donaldson Torit
Modular Baghouse Collectors*

Dura-Life — A technology breakthrough for bag users.

Polyester bags are produced with a needling process that creates larger pores where dust can embed into the fabric, inhibiting cleaning and reducing bag life. Dura-Life* bags are engineered with a unique hydroentanglement process that uses water to blend the fibers. This process provides a more uniform material with smaller pores, better surface loading, and better cleaning. These advantages provide twice the operating life before bags need to be replaced due to pressure drop. Longer life from Dura-Life bags lowers maintenance and operating costs and raises baghouse dust collection to a whole new level.

These photos were taken with a scanning electron microscope of bag media used in a collector that was filtering fly ash. The bags were removed after 2,700 hours of use. Air-to-media ratio was 4.5 to 1. Pressure drop was 6 in. on polyester bags and 2 in. on Dura-Life.

Dura-Life bags provide big benefits!

Dura-Life technology provides better surface loading and better pulse cleaning, resulting in:

- **Two to three times longer bag life**
- **Energy savings due to lower pressure drop**
- **Reduced replacement bag costs due to fewer bag changeouts**
- **Reduced maintenance and operating costs due to fewer bag changeouts**
- **30% fewer emissions based on EPA tests**

* Dura-Life bags are made with Durapex® filter media manufactured by Polymer Group, Inc.

Cleaner Air Worldwide

Better Technology

- 550 engineers worldwide
- More than 500 patents
- Broad range of innovative collectors and filters
- 100's of media formulations

Experience & Service

- Technical expertise and support
- Ready-to-ship filters and parts within 24 hours
- 1,000,000+ dust, fume, & mist collectors installed

Global Support

- Facilities in 35 countries
- 37 manufacturing plants and 11 distribution centers
- Sales offices worldwide
